INVision seamlessly integrates with the following business systems:

...plus dozens of other systems.
Call to ask about yours!

“INVision allows you to extend your business system into the warehouse.”

Warehouse Management System Now Available for Small – Medium Companies

INVision™ Warehouse Management System from Miles Technologies is built from the ground up to provide the solid functionality required by small to medium companies, without all the extra complexity and cost of other systems. INVision provides real-time visibility into warehouse operations, ensuring greater customer satisfaction, improved productivity, and better inventory accuracy.

How INVision Delivers on its Promise

How can INVision deliver the functionality needed by small to medium businesses at an affordable price? The answer to this is two-fold:

1. INVision is built with small to medium size businesses in mind. This means that it isn't over-complicated with extra features which these companies just don't need, like coordination of large team efforts or sophisticated task prioritization. Included in INVision are the solid features which deliver the most benefit to the companies in its intended market. You shouldn't have to pay for features if you aren't big enough to use them.

2. INVision is delivered under a Software-as-a-Service (SaaS) subscription model. Companies don't have to hire IT professionals and buy a lot of extra computer servers to benefit from a warehouse management system. Low startup cost and monthly payments allow companies to get a return on their investment every month instead of waiting for months or years. This licensing model makes INVision warehouse management system affordable for nearly every warehouse.

Benefits of a Warehouse Management System

Warehouses must be more efficient today than ever before. The old ways of managing inventory just can't keep up. Companies adopt warehouse management systems to:

- Improve Productivity
- Reduce Inventory & Labor Cost
- Gain Real-time Visibility
- Reduce Human Error Through Automation
- Increase Inventory Turnover
- Avoid Stock Outs
- Improve Inventory Accuracy to 99.99%

Is Software as a Service (SaaS) Right for You?

Software as a Service, or SaaS, may be a new term but it certainly isn't a new idea or technology. SaaS has been around for years under different names like "online access" and "cloud computing."

A software application (like INVision) is installed on one or more computer servers somewhere on the internet. Companies can use the software for a monthly fee, connecting to the software through a regular internet browser (like Internet Explorer) across the internet. Everything is provided within the subscription.

Most people have used SaaS, although they may not have known it by that name. Some common consumer SaaS applications are:

- Online banking
- Online income tax preparation
- Social networking sites
- Stock trading
- Investment sites and many more!

Some of the benefits of using SaaS are:

- No large, upfront investment
- Access anytime, anywhere
- No added computer servers
- No added software to install on PCs
- IT support is included
- Software support is included
- Software upgrades are included
- Deploy in weeks not months
- Integration into ERP/accounting
- Scalable to fit any size business
- Realize ROI monthly!

INVision Features

Inventory Tracking	Gain real-time visibility into supply chain operations.
Receiving	Quick and easy process for checking goods into inventory and establish real-time inventory accuracy.
Put-Away	Place inventory in specific warehouse locations to streamline inventory movement.
